

PETITION

Zero Emission Law Implementation

WHEREAS the scientific consensus demonstrates the harmful health effects of air pollution caused by fossil fuels;
WHEREAS road transport (cars, trucks and buses) is responsible for 80% of emissions in the transport sector and 31% of total greenhouse gas emissions (GHG) in Quebec;
WHEREAS Quebec has a trade deficit in energy transport material and is not assured of a secure economically stable fuel supply;
WHEREAS Quebec has specific targets for GHG reductions of 20% below the 1990 emissions by 2020;
WHEREAS the electrification of public or individual transport is essential to reduce GHG emissions from Quebec;
WHEREAS the supply of electric vehicles must be present to achieve the level of electrification of transportation with 12,500 electric vehicles in 2017;
WHEREAS Quebec has underutilized electric infrastructure;
WHEREAS, significant investments have been made to the electrification of transportation;
WHEREAS the supply of electric vehicles is present mainly in jurisdictions that require it;
CONSIDERING THAT a law would develop expertise in electric transport, would achieve our objectives and would allow our electromobility industry to shine;
We, the undersigned, call on the Government of Quebec to implement a Zero Emission law with penalties on manufacturers who fail to provide an adequate share of electric vehicles for Quebecers to achieve all of the above.
